PROFILE

I build useful products while working toward the German Abitur. My focus spans AI-assisted marketplaces, school writing software, and tools that catch broken lead journeys. I use AI coding tools and own the product decisions, integration, review, debugging, and testing.

SELECTED PROJECTS

AgentBay

Early product + friend pilot

- Built an AI-assisted secondhand marketplace with an app and discovery feed. Assistants help prepare listings, suggest prices, search items, and make offers; owners approve listings and offers.
- In a four-friend pilot: 58 physical-item listings, 44 initiated by AI suggestions. Across all 231 listings, including Minecraft items: 35 real-world sales totaling €1,492.32 in trade value, not company revenue.

ScribbleOffice

Early-stage school platform

- Founded and led technical development of a workspace for assignments, collaborative editing, teacher feedback, and writing-process replay.
- Built with Next.js, React, TypeScript, PostgreSQL, TipTap, and Yjs. No completed school pilot or paying school customers yet.

LeadUptime

Pre-release validation

- Worked on browser checks that follow a lead journey from landing page through form submission to expected success state, with a WordPress integration.

First published game

Roblox + Lua

- Published at about 11 without paid advertising; reached 40,000 visits and around 32 concurrent players at peak.

CURRENT FOCUS

The four-friend pilot tested whether people understood AI-assisted listing and whether real sales would follow. Both happened. I am now testing whether that behavior repeats beyond my friend group, with more users and real offers through the live product.

EDUCATION

Leibniz-Gymnasium Pirmasens
11th grade; working toward the German Abitur.

RECOGNITION

ScribbleOffice selected for the 2026 Global EdTech Startup Awards regional semifinals. Online pitch scheduled for 11 November 2026; result pending.

ENGINEERING

- JavaScript, TypeScript, React, Next.js, Node.js, PostgreSQL
- APIs, browser automation, WordPress integrations
- AI assistant tools and human approval flows

OPEN SOURCE

Contributed an LRUDict.get() default-value fix to AWS Lambda Powertools for Python.

BEYOND CODE

Romanian and German background; English developing toward C1; French; Mandarin at HSK 1. Hackathons in Karlsruhe-Durlach and Fulda; QuestNest team project at Fulda. Model United Nations, tennis, and computational physics research in progress.
